THE CLAIMS ARE ATTACHED AS AN APPENDIX BELOW FOR THE EXAMINER'S CONVENIENCE.

13. (Once Amended) An arrangement for directly controlling the movement of a zoom system in a stereo microscope, comprising:

direct driving motors for at least one moving lens system wherein the driving motors are controlled by a control unit which reads calculated pre-stored values of reference points from a mathematical controlling curve for directing the movement of the at least one moving lens system by controlling the driving motors in a corresponding manner without necessitating use of mechanical generation of the mathematical controlling curve and without an additional monitoring system.

- 14. (Once Amended) The arrangement according to claim 13 with two lens members which are controlled independently from one another.
- 15. The arrangement according to claim 13, wherein lens members are provided as lens pairs in a Greenough type stereo microscope or telescope type stereo microscope.
- 17. (Once Amended) The arrangement according to claim 13, wherein the driving motors are linear drives.
- 18. The arrangement according to claim 17, wherein the linear drives are arranged in the stereo microscope housing.

9

19. (Once Amended) The arrangement according to claim 18, wherein the driving motors are arranged between lens pairs.

- 20. The arrangement according to claim 13, wherein a plurality of moving lens members are controlled jointly.
- 21. The arrangement according to claim 13, wherein at least two lens members are driven separately.
- 22. (Once Amended) The arrangement according to claim 13, wherein a linear magnification that is adjusted is determined and displayed to the operator during the controlling of the zoom system.
- 23. The arrangement according to claim 13, wherein control units are used for motorized zoom adjustment and for motorized focusing of the microscope.
